

Leading In Sustainable Wood Biomass

Founded in 2004, Enviva is a leading global energy company specializing in sustainable wood biomass. We are the world's largest producer of wood pellets, which provide sustainable, low-carbon heat and power, replacing fossil fuels.

At Enviva, we recognize that our future depends on thriving, abundant forests. Forestland is one of America's greatest natural resources, and we are committed to keeping these forests healthy and growing.

Enviva's **Track & Trace**[®] program is a one-of-a-kind system that makes it possible for Enviva to track every ton of wood we buy back to its origin in the forest or sawmill. Because of this traceability, we have a detailed understanding of the characteristics of the wood we use and the forests we touch, and we can pass this information along to our customers.

Track and Trace[®]

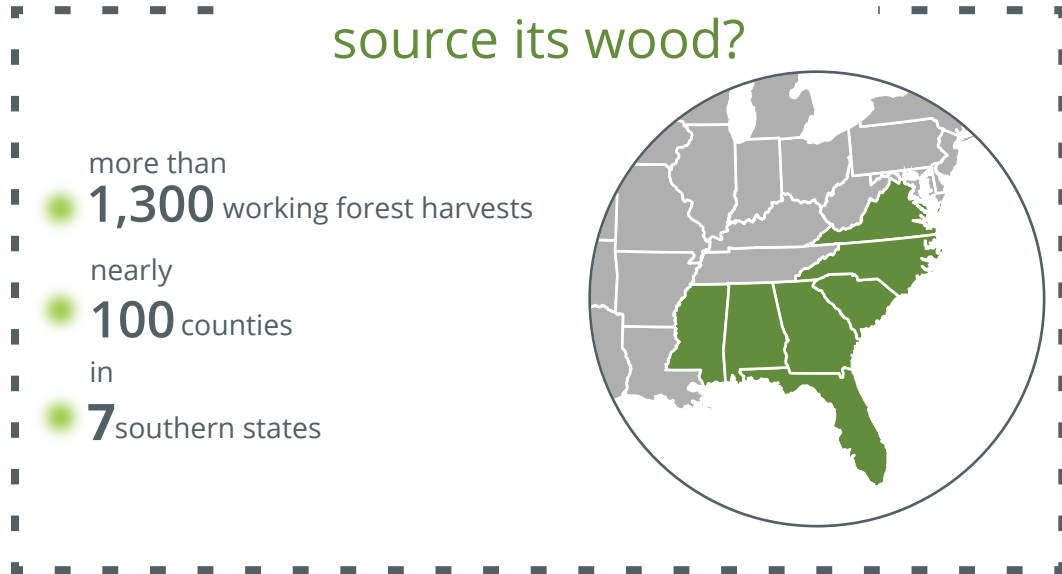

VALUES-DRIVEN SOURCING

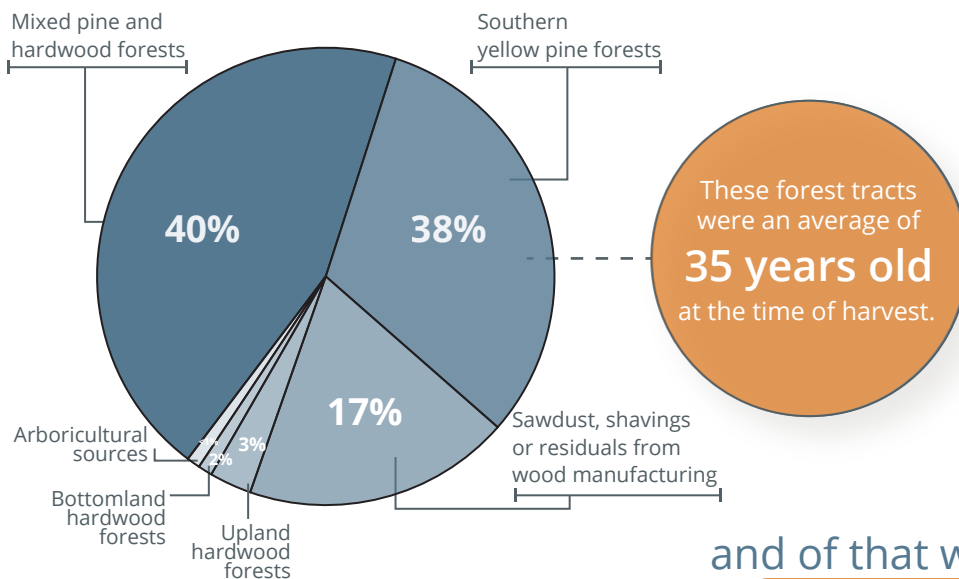

With Track & Trace, we record the geographic location, age, and forest type for all of our primary wood. We know how and by whom each tract was harvested, as well as the proportion of wood that was sent to Enviva versus other forest products industry consumers.

Between 2011 and 2016, forest inventory in our supply base has increased by more than 150 million tons.

Where does Enviva source its wood?

What is the source of Enviva's wood?

These forest tracts were an average of **35 years old** at the time of harvest.

and of that wood

53% was hardwood and **47%** was softwood
